Mines and Mining Stocks

CAMP OF COPPER **NEAR MORGAN**

Systematic Work Proving Up Region Known for Thirty-

There has been a lot of history-making work done in the region of Morgan, in Wisher capyon about twenty-six miles will conditions were accurately that the trivial what conditions were accurately the trivial will be a second to the trivial will be a secon Weber canyon, about twenty-six miles southeast of Ogden, during the past few years, and the reports coming from there now indicate that two or three sure enough mines, with a wine range of eligible prospects, are now ready to figure in making another big producing mining man's seen it. railroad passes right through it, that it is going to be necessary to draw on the past for information that will impress

COPPER STOCKS IN **BOSTON AND NEW YORK**

Following is the daily market comment of Paine, Webber & Co., Boston, together with the range of prices of copper stocks with the range of prices of copper stocks and other Boston listings in which the west is interested, as well as a similar report on New York curb transactions, by James A. Pollock & Co., and from which it is secured for use in this department of The Herald.

Of that blowout and rolled over the dump. We were after lead, and copper did not count. We found just enough lead to string us along. Finally I went broke and had to leave to earn more money. Last year I learned that some Chicago people were in here and going

Boston, Dec. 5.—The opening was strong and active all through the list, but the government's action in regard to the Washoe smelter gave the bears courage, and they commenced to hammer Amalgamated and the other metal stocks. We think it wise to take profits for a turn, especially in low-priced rails, which have had such an advance the past few days. Lake and the Amster stocks are still the best performers in the local market, bebest performers in the local market, be-

1909 Pierce Great Arrow SIX-CYLINDER, 48 H. P. Has Arrived THIS CAR

is the masterpiece of the finest motor car factory in the world, representing the very highest type of automobile engineering and body work. On exhibition at our salesroom.

Tom Botterill Automobile Co. 62-64 West Third South.

future.

For many years it has been known that the region surrounding the town of Morgan, in what is termed the Weber valley, was full of mineral, because stock-

ley, was full of mineral, because stock-men in the valley have, from time to time, exhibited samples of ore, much of which carried high values in copper, sil-ver, lead and gold. For forty years there have been periodical attempts at pros-pecting, but very little of it was of a systematic kind, because the farmers who indulged in it were either shy of money or they had no knowledge of mining. r they had no knowledge of mining. About thirty years ago there drifted into five Years to Carry Ore.

LOCATOR TELLS STORY

ROLLED COPPER ORE OVER IN SEARCH OF LEAD.

About thirty years ago there drifted into the section an intelligent young prospector named Fuclove Manhart, who has since become widely known as an expert on mineral formation and who has located many properties in different camps which, had he held on to them, would have made fortunes for him. He located ground in the early days of Park City that is now a valuable portion of the Silver King Coalition company's possessions. Recently he returned to Morgan to learn what conditions were after gan to learn what conditions were after

Rolled Copper Ore Over the Dump. "I was the first man to break ground in these hills. It was my father and I who did the first work in these mounerough mines, with a wide range of eligible prospects, are now ready to figure in making another big producing mining district to add to Utah's already splendid list. So little is known of what has been going on there, though the Union Pacific railroad passes right through it, that it is going to be necessary to draw on the past for information that will impress the stuff wanted. As a matter of fact, we did not know anything about other characters of ore. In all my wanderings my mind was strongly tied to this region because I have always believed this mineral belt to be the true 'mother lode' of Utah. I did a lot of that work you see up there, and if you will look about in the brush down in the canyon, you will find some of a lot of great boulders of almost pure copper that we took ou of that blowout and rolled over the

> at it right, so I drifted back, and here am going to stay and make my 'pile,' for it is here to be made."
> Other parties besides Manhart have done more or less work in the district, but until the Chicago crowd took hold, nothing was accomplished. It was a little more than a year ago that the Chicago crowd had its attention directed to the district and its possibilities by George T. Stenhouse, and the result of the examination that followed was the formation of the Morgan-Crescent Minhouse as its general manager. In a recent talk on the district and its disclosures, as made in the Morgan-Crescent and other properties, Mr. Stenhouse said:

Results Follow Systematic Work. "As soon as we secured this property

a campaign of systematic development was entered upon and with most encouraging results. One of our groups of claims contains a remarkably strong blowout, from which has been secured some very high assays in copper and gold. Stringers of high-grade coppergold ore were followed off from this blowout in the early days by prospectors looking for lead and who were in ignorance of the real value of the rock they were throwing over the dump. Today a campaign of systematic develwere throwing over the dump. Today many of the old-timers are greatly sur-prised to learn that almost the entire district shows that copper is the predominating metal and that it is there in abundance. While there is some indications of lead, it has not been develo in paying quantities nearer to us than the Carbonate Hill district, seven miles to the north; but here, again, they have our formation flanking the lead forma-

"The principal work in the Morgan-Crescent has been the driving of a tunnel to tap the vein in contact with a big dyke of quartzite that crops out boldly about 300 feet back from the blowout mentioned and which is near the top of the mountain. The ledge should be reached in about 650 feet and we shall then have about 600 feet of backs, or stoping ground. The surface ores indicate a large ledge and the values are high, so we expect a fine showing when the vein is tapped by the tunnel. The lode is a quartz-porphyry in contact with a strong quartzite dyke, the usual bome of large bodies of copper ore. In driving the lower tunnel we encountered small seams of tale and farther in light porphyry carrying a heavy percentage of pyrites of iron. When assayed this material gave returns of \$4 to \$660 in gold. This condition occurs in the blue lime, fully 350 feet back from any known body of ore, and in view of recent disclosures in Tintic is counted as significant. "The principal work in the Morganand in view of recent disclosures in Tin-

tic, is counted as significant. May Be Mother Lode of Utah.

Recently a number of local mining engineers and operators visited the the showing that had been made, and one of them, though declining to be quoted until further developments had demonstrated the fact, gave it as his opinion that the "mother lode" of Utah passes through this portion of Morgan county. The present disclosures in the district are the more interesting because the men who have put their money in the ground for so many years have been objects of compassion, and no little ridicule by seemingly wiser people. objects of compassion, and no little ridicule by seemingly wiser people. It is claimed also that the Morgan City

Two Denver companies and one Colorado Springs crowd are already in the Morgan district, and another Colorado Springs crowd and some Salt Lake parties are making preparations to take hold of ground there. The ores are counted as essentially high-class for fluxing purposes on account of the heavy percentages of iron which they contain, a fact that has demonstration in the fact that Calumet & Hecla interests are now mining and shipping ore from a point seven Calumet & Hecia interests are now min-ing and shipping ore from a point seven miles northwesterly from Morgan. Tak-ing all these things into consideration, and the fact that the district is traversed by the Union Pacific railroad, friends of the camp are predicting a magnificent

TINTIC SMELTER MAY GET WATER FROM THE GEMINI

Mining company may be The Gemini Mining company may be called upon to furnish some of the water needed by the new Tintic smelters, says the Eureka Reporter. At the present time the water for the smelter is being taken from the Swansea mine at Silver City but when the present plans are carried out and the smelter is enlarged it is thought that more water than this mine is able to supply will be required and then a contract will undoubtedly be made with the Gemini people.

emini people.

The Gemini pumps are now throwing an The Gemini pumps are now throwing an immense stream of water out of the mine and by utilizing an old unused pipe line, which extends from the Eureka Hill mine to a point below Robinson, it would be an inexpensive matter to get this water over to the smelter as no pumping would be necessary after it leaves the Gemini mine. There was a slight accident to one of the big electric pumps at the Gemini this week, but the damage was soon repaired by Master Mechanic F. B. Sullivan and the pumps are now running as smooth as umps are now running as smooth as

high grade in the mine have been a constant source of sensation to the district as well as to the outside holders of the stock.

So far as is known outside the management they have drifted on four levels of 300, 500, 600 and 750 feet. On each level wonderfully high grade ores have been found. At each juncture the drifts were bulkheaded and the report circulated that on account of danger from water flooding the mine shipments of ore would be deferred until a still lower level was reached. On the lower level was reached. On the lower level was reached on the mine shipments of ore would be deferred until a still lower level was reached. On the lower level was reached on the stay over long enough to see the furnace at work on ore. Nothing can hold the Ploche country back any longer, but the country will move with accelerated speed the moment it becomes known that smelting facilities such as the Fink process promises are available."

Mr. Freudenhal states that the development of the Lucky Star property is being attended with most substantial results. A winze from the main shaft working is now being put down in a body of lead-silver ore that makes in an iron and manganese gangue, while on another the stay over long enough to saw the form to stay over long enough. y-four hours. This work is done with a small 15-horse-power gasoline engine. The small 15-horse-power gasoline engine. The thing mining men do not understand is why a rich property like this attempts such unusual, impracticable methods. The raising of so much water from such great depths without a pump; so much ore blocked out on upper levels and the full capacity of the machinery working on muck and hoisting water, resolves a condition without a theory. They can go on forever raising muck and water without making any return to the investors or until such time as the small stockholders become weary of waiting and sacrifice their holdings.

Going Into Coalition.

The property of the Proceeded about two miles west of the Mendah, in the gold belt that flanks the lead-silver zone. It is showing up in splendid style and Mr. Freudenthal is santended style and Mr. Freudenth

A coalition scheme is under way and in the district.

A coalition scheme is under way and in the district.

Numerous other properties, the visitor time it is proposed to take this stock, three shares for one, into the coalition. This would mean about 33 1-3 cents; a share while the stock is now selling around 20 cents. It is not probable any of the coalition stock can be had for less than \$1. Its fair valuation will soon be from \$5 to \$15 per share. As the suppression of this plan is working hardship and loss on many investors in the stock and loss on many investors in the stock and has the effect of casting doubt as to the merits of this camp, thus retarding its progress by depreciating other properties, the real condition of things can do no honest person harm by being made public. There are hundreds of people in Salt Lake that will be glad to know what is being done with this perticular property. done with this particular property. The coalition scheme will be announced in the spring and if the sale is not already consummated for the control of the big mer-ger it need not surprise anybody to hear district that will surpass in actual values that of the now famous Goldfield Consolidation.

Ledges Greater Than Goldfield.

held from the public at large by certain interests is a conclusion forced upon any disinterested person with a knowledge of what is here.

There is but one stock of this great district listed on any mining exchange in America—that alone in Salt Lake City With a half hundred other stocks traded in daily, many of which have yielded mil-tions in dividends, what could reasonably be expected as to the value making power in the one locality, of a single non-divi-dend paying stock from a comparatively new camp. Those who know of these things have made uncomplimentary referthings have made uncomplimentary reference to Salt Lake mining men as a whole. When it was cited that Salt Lake City was the greatest natural mining center and that the real development on some of the greatest mines in the world was done by Salt Lake men, the argument stopped. What a pity these big men can't look across the state line into Nevada and add more laurels and prizes to those already. nore laurels and prizes to those alread

Hint to Salt Lake Merchants.

As to Salt Lake merchants, you are a little slow. You'll likely let this trade seek sea level; that's it's natural course unless you intervene with a little steam to pull it your way. A little instance happening only yesterday will serve as an illustration. A mine operator here wanted ore cars and rails. Local merchants got \$65 for the car and 5½ cents for \$-pound rails. Not satisfied with these prices, the operator wrote a Salt Lake firm for quois claimed also that the Morgan City mineral belt is a continuation of the Park City belt, being in direct line between that camp and the Carbonate Hill district, northeast of Ogden, which is now coming into prominence.

Four miles east of the Morgan-Crescent property the Chicago-Utah company has lock to this district the steel can be put Four miles east of the Morgan-Crescent property the Chicago-Utah company has done considerable development work. Some fine oxides of copper have been encountered and depth is depended upon to make a fine mine. The formation here is different than that found in the Morgan-Crescent and the croppings of the lode have been traced for sixty miles, over into Wyoming.

Two Denver companies and one Colorado Springs crowd are already in the

Twenty years ago the man that proposed to operate street cars in Salt Lake City and Ogden by the water power then going to waste in Ogden canyon was looked upon as visionary, impracticable and was shunned by those who could have helped themselves and him by listening to his plan. He was living in advance of those whose business is only to figure interest as it falls due.

Today the same man suggests the second of the same second of the sa

those whose business is only to figure interest as it falls due.

Today the same man suggests the securing of rights of way and making of surveys from both the Western Pacific and the Southern Pacific main lines of railways into the Seven Troughs district. An electric railway could be operated on easy grades from both lines. An immense water power, some sixty miles distant, can be developed for operating both lines of railway. Additional power is needed in a half dozen fair-sized towns for lighting and power purposes. There will be a hundred mines wanting light, power to run their hofsts, mills and interurban car service between the different properties. The man that comes in here now will secure water rights, land and can contract, within the next six months, enough power to warrant commencing work early in the spring.

The cheapest coal here for making steam power today is \$27.50 per ton. Water rates and everything else on which railroad rates and power for machinery has a bearing are correspondingly high.

What a chance for meh with money!

Ore and Bullion.

Ore and bullion settlements in this city yesterday, as reported by McCornick & Co., amounted to \$125,000. as follows: Silver, lead, gold and copper ores, \$50,000; base bullion, \$75,000.

Ed. F. Freudenthal Says Pioche Country Is Deeply Interested in Success of Process.

Seven Troughs Writer Tells of Complaints and Criticisms of Big Mine Handling.

FEAR OF FREEZE-OUT GAME

SALT LAKERS ARE LOSING OP-PORTUNITY.

Seven Troughs, Nev.. Dec. 4.—There are numerous enquiries and some severe criticisms from Salt Lake of the condition of some Seven Troughs mining properties.

Ed F. Freudenthal, manager of the Lucky Star and the Pioche-Comet Development companies' properties, and who is also looking after the work being done at the Newhouse group and other fine prospective bons nass in the Pioche country, is up from camp on business for a few days. One of the particular things that has brought him here at this time is to make an investigation of the Fink smelting process, that is now about ready for real demonstrative work.

"Everybody in the Pioche region," said Mr. Freudenthal during the day, "is intensely interested to know what the new smelting process is going to amount to, it creates more talk and discussion down our way than anything that has cropped to the surface in a long time, not barring the many splendid strikes that have been made in properties recently in the various districts surrounding Ploche. We have got to have smelting facilities down there and, if this Fink process turns out as

icisms from Salt Lake of the condition of some Seven Troughs mining properties. These criticisms and enquiries come from stockholders who have contributed money toward the development of the mines. Probably as much as \$100,000 of Salt Lake capital has been tied up in one stock for a year or more. The strikes of high grade in the mine have been a contributed to see the furnace at work on ore. Nothing high grade in the mine have been a contributed to see the furnace at work on ore. Nothing high grade in the mine have been a contributed to see the furnace at work on ore. Nothing high grade in the mine have been a contributed to have smalting facilities down there got and, if this Fink process turns out as we are hoping it will do, it will be just the thing, as the different districts can then have their, own separate reduction works. I have been asked to find out all I can about it during this trip, and it is my intention to stay over long enough to see the furnace at work on ore.

on account of danger from water flooding the mine shipments of ore would be deferred until a still lower level was reached. On the last level, at 750 feet, a quartz vein was struck, also water. They hoist 108 buckets of water to about forty buckets of muck or vein matter in twenty-four hours. This work is done with a small 15-horse-power gasoline engine. The the Mendah in the gold belt that flanks

states, are making such a showing that to talk of one would be doing injustice to another if not mentioned and, as time was limited. Mr. Freudenthal asked to be

Strong Session of Trading. excused from further questioning until no had had time to transact business that could not be held over. He will be here several days.

Streaks of "Worthless Stuff" Found to Carry 1,711 Ounces of Silver.

Whitish-looking seams of what appeared o be taley substance have been making through the ore body in the face of the drift on No. 1 fissure on the 400-foot level of the Prince Consolidated property at Pioche for several days. The same kind of stuff is also making in the winze that has been started down from that level to prospect the big and rich body of ore, and the management has been inclined to deplore the fact, as, aside from what were considered spots of lead in it here and there, the material was counted of no particular value. When possible it was separated from the ore and shied over the ump as waste.

Friday the stuff, samples of which have been in the company's offices for several days, were examined closely with a glass and the conclusion was reached that the dark spots resembled horn silver, while the discoloring of the soft, though rather gritty, rock was suspected of having been caused by a silver chloride. Acting on the suspicion caused by the close scrutiny a chunk of the stuff was submitted to the assayer. The returns were startling. Instead of carrying a trace of silver, as some thought the test would show, the assay certificate conveyed the information that the sample were 1711 concess.

MINING STOCK EXCHANGE.

The local mining stock market has looked and acted a little better during the past two or three days, the strike in Nevada Hills and the anticipation of a strike n the Iron Blossom helping the situation materially. There has also be a slight improvement in the silver market, and that has had a good effect, also. There is still a feeling, however, that the tariff tinkers will take a shy at the duty on lead, and if that should become the apparent purpose of the committee on ways and means stocks representing lead, silver and means stocks representing lead silver. parent purpose of the committee on ways and means stocks representing lead-silver mines would suffer materially. Until the matter is decided it is hardly likely that there will be much of a bulge on this class of stocks.

There is a big success and the bilster copper made is just as high in value as the first experiments showed. The tramway continues to transport a very large tonnage to the bins, and it is understood that over \$300 tons of ore are being treated every twenty-four hours. The comments has been

YAMPA SMELTER IS NOW PRACTICALLY COMPLETED

Now that the Yampa smelter is about class of stocks.

During the week a total of 620,339 shares of stock, with a selling value of \$421,639.23, changed hands, yesterday's contribution to the totals being 70,820 shares and \$45.

101. Following is the list of final quo-101. Following is the list of final quotations and record of sales made yester-waiting for supplies, says the Bingham Bulletin Bid. Asked.

The McDougals and the reverberatories are all running smoothly, as are the blast furnaces. Manager C. W. Saxman was at the property a few days ago and made a the property a few days ago and made a thorough inspection, and was very much pleased at the way in which the plant wa sbeing handled and also of the re-sults which had been obtained. The mine also continues to yield the tonnage necesalso continues to yield the tonnage necessary and the property is in fine shape.

Among the working force there were several changes made on the first of the month. Foreman E. C. Trask, who has been identified with the company for several years, resigned to take a position with the Wasatch Coal company in the city. E. L. Kraemer, the assayer, also resigned and left to give his attention to the coal company in which he is interested. Lin Wherry, who was formerly engineer at the mine, has succeeded Mr. Kraemer as assayer at the smelter.

DOINGS OF UNLISTED STOCKS ON EXCHANGE

The usual Saturday quiet reigned in the unlisted stocks yesterday. One lot of Mineral Flat changed hands at 14c, Plutus sold at 16½c and 17c, and Uintah Treasure Hill at 28c. Bingham Standard Copper was offered at 16c and Bingham Central-Standard was quoted at 30c at 31c, East Crown Point at 2c at 2½c, Mammoth was an offering at \$1.85. Ohio Copper was quoted at \$5.35 at \$5.50, Western Nevada Copper at 35c at 40c, and Seven Troughs Coalition at \$1 bid.
